

VISHAL DAS

Operations Manager | Process Improvement · Systems Thinking · KPI-Driven Operational Excellence
Bangalore, India · kindavishal.work@gmail.com · +91 7005316149 · kindavishal.js.org

SUMMARY

Operations manager with 4 years identifying structural inefficiencies, implementing durable fixes, and driving measurable KPI improvements across high-volume programs. Track record of bridging frontline execution and system design — built SOPs, training frameworks, and automated workflows that eliminated manual overhead, reduced onboarding time, and improved operational consistency across distributed teams. Comfortable owning escalations, running retrospectives, and translating operational pain points into clear requirements for tooling and process improvements.

CORE COMPETENCIES

Process & Systems: Root-cause analysis, SOP design, workflow optimization, documentation frameworks, system-level fixes

KPI & Performance: SLA tracking, escalation-rate management, backlog health, engagement metrics, business-review cadence

Training & Enablement: Scalable training programs, onboarding frameworks, regional lead coordination, quality-standard reinforcement

Cross-Functional: Product/Engineering/Ops collaboration, stakeholder reporting, risk identification, tooling requirements

Tools: Looker, BigQuery, Apps Script, Notion, Typeform, Buganizer, Next.js/Supabase (internal tooling)

EXPERIENCE

Operations Manager, Growth Programs — Firecrawl *May 2026 – Present*

Series A · Web-data infrastructure for AI

- Identified a structural data-integrity issue in existing reporting dashboards (significant under-reporting of a key operational metric) and built an internal tracking tool that became the system of record for performance measurement.
- Designed the end-to-end operational workflow for four parallel programs (intake → review → milestone tracking → payouts) with full SOP documentation, eliminating ad-hoc processes and improving auditability.
- Reframed program KPIs from lagging to leading indicators, aligning operational reporting with a company-wide 3M+ weekly target and improving the team's ability to intervene early on underperformance.
- Drove a 4x improvement in a core distribution KPI (1.7K → 7.2K weekly) through systematic process changes and performance tracking at the individual contributor level.
- Manage vendor/agency relationships with defined SLAs and automated output tracking against targets.
- Partner with marketing leadership to surface operational bottlenecks and align cross-functional priorities.

Operations & Program Manager — Google (via Marketstar) *May 2023 – Dec 2025*

- Owned operational performance for a high-volume enablement program spanning 300K+ participants, 100K+ completions, and 300+ institutional partners — tracked delivery KPIs and escalation rates across a distributed regional team.
- Identified recurring onboarding inefficiencies and designed a standardized partner onboarding framework that reduced onboarding time by 30% across 300+ partners.
- Built process-automation workflows (Apps Script) that eliminated 20+ hours/week of manual operational overhead — an 80% efficiency gain on previously manual reporting and coordination tasks.
- Ran structured retrospectives and business reviews: tracked SLA adherence, surfaced risks to leadership proactively, and iterated on operational playbooks based on performance data.
- Managed a distributed team of regional leads coordinating delivery across 150+ organizations — acted as the escalation point for complex, multi-stakeholder operational issues.
- Led risk and compliance workstreams — coordinated Legal, Privacy, and Security review for high-visibility programs, implementing safeguards that improved operational defensibility.
- Translated frontline operational pain points into tooling requirements: built a structured feedback loop via Buganizer that routed field issues directly to internal engineering for system-level fixes.
- Designed and delivered regional training programs for partners and regional leads, reinforcing workflows, quality standards, and operational consistency at scale.

Operations Coordinator — Google (via Optimum Infosys) *May 2022 – May 2023*

- Designed a tiered operational strategy that exceeded quarterly performance OKRs by 50% (8% MoM improvement, 30%+ engagement rate).
- Ran daily issue triage and escalation management across a 100+-partner operational network, maintaining platform stability.
- Built the feedback-loop infrastructure routing field-level issues into product-improvement tickets, closing the gap between frontline operations and engineering.

Operations Lead, Institutional Programs — CodeChef *Nov 2020 – May 2022*

Started during final year of B.Tech; transitioned to full-time post-graduation (2021)

- Scaled an operational partner network from 100 to 300+ organizations in 12 months — designed onboarding SOPs, defined engagement workflows, and implemented tracking to monitor partner health.

- Designed a repeatable program model that was later adopted as the operational blueprint for a subsequent large-scale Google initiative.

TECHNICAL & INTERNAL TOOLING

- Built TubeMonitor (Next.js + Supabase) — internal operational tool for tracking performance metrics, identifying reporting gaps, and benchmarking against targets.
- Mozilla Reps · GitHub Campus Expert · Gatsby OSS Maintainer — distributed team coordination and operational contributions across open-source projects.

EDUCATION

B.Tech, Computer Science & Engineering — Lovely Professional University (2017–2021)

Google UX Design Professional Certificate

SKILLS

Process Improvement · SOP Design · Root-Cause Analysis · KPI Tracking · Escalation Management · Workflow Automation · Training & Enablement · Cross-Functional Collaboration · Retrospectives · Risk Management · Looker · BigQuery · Apps Script · Buganizer · Notion · Next.js/Supabase
