

VISHAL DAS

Program Manager | Cross-Functional Execution · Process Improvement · Risk & Stakeholder Coordination

Bangalore, India · kindavishal.work@gmail.com · +91 7005316149 · kindavishal.js.org

SUMMARY

Program manager with 4 years driving cross-functional initiatives from ambiguity to execution — currently running growth and distribution programs at a Series A web data infrastructure company, and previously managed a multi-campaign technical enablement portfolio for Google's India developer programs. Track record of building the operating systems that make programs scale: dependency tracking, stakeholder reporting, process documentation, and risk/compliance coordination across Legal, Privacy, and Security functions. Comfortable owning ambiguous 0-to-1 mandates end to end — scoping, KPI design, cross-team execution, and the tooling to track it all.

CORE COMPETENCIES

Program & Project Management: Cross-team delivery, dependency tracking, OKR design, MBR/QBR reporting, risk mitigation, contract/MOU governance

Stakeholder & Risk Coordination: Legal/Privacy/Security review coordination, enterprise & government stakeholder alignment, escalation management

Data & Reporting: Looker, dashboarding, KPI reframing (lagging → leading indicators), automated tracking systems

Process & Tooling: AI-assisted operations tooling, Notion, Typeform, Apps Script, internal tool-building (Next.js/Supabase)

EXPERIENCE

Program Manager, Growth & Distribution Programs — Firecrawl 2026 – Present

- Owning end-to-end program management for Firecrawl's post-Series-A growth initiatives — scoped, designed, and launched four parallel programs as a single stackable operating system with no prior owner; codified execution into a reusable 12-step program-build framework.
- Managed the full lifecycle of a multi-tier incentive program — designed a points-based milestone structure with proportional payouts and a graduated retention mechanism, from scoping to first cohort live in ~4 weeks.
- Drove a 4x improvement in a core distribution KPI (1.7K → 7.2K weekly attributed referrals) and exceeded a cross-functional delivery cadence target (7 vs. 6 planned weekly deliverables; 11+ in peak weeks).
- Identified a data-integrity gap in existing reporting dashboards (significant under-reporting of a key metric) and built an internal tracking tool to close it — now the system of record for program performance and benchmarking.
- Reframed program KPIs from lagging to leading indicators, aligning cross-team reporting with a company-wide 3M+ weekly target owned jointly with the marketing organization.
- Designed and documented a lightweight ops stack (intake → review → milestone tracking → payouts) with full program playbooks, removing dependency on enterprise SaaS tooling.
- Manage an external vendor/agency relationship and a content-performance initiative, coordinating output against defined targets with automated tracking for ongoing visibility.
- Partner directly with marketing leadership to align program timelines and surface collaboration opportunities across the full product surface.

Operations Manager, Program Management — Google (via Marketstar) May 2023 – Dec 2025

- Owned end-to-end delivery of a large-scale enablement program — coordinated training, certification, and placement pipelines reaching 300K+ participants, 100K+ verified completions, and 300+ confirmed outcomes.
- Expanded a formal partner network 3x (100 to 300+ institutions) in 12 months — managed a distributed team of regional leads and governed 300+ MOUs/contracts.
- Built and ran a 3,500+-member technical mentor network supporting platform adoption across 150+ partner organizations.
- Managed a multi-campaign program portfolio spanning AI platform adoption (70K+ Vertex AI activations), technical enablement (40+ sessions, 50K+ engagements), and partner-side technical alignment (40+ partner organizations).
- Drove platform adoption outcomes — 1,000+ production deployments enabled, 40+ partners upskilled on Kotlin/Jetpack Compose, 60K+ developers enabled on the Gemini API.
- Delivered operational efficiency gains — automated 20+ hours/week of manual process (80% efficiency gain), cut partner onboarding time by 30%, streamlined vendor workflows.
- Led risk and governance workstreams — coordinated Legal, Privacy, and Security review for high-visibility, multi-stakeholder programs involving government partners.

- Ran structured dependency tracking and status reporting across a distributed program team spanning 300+ partner relationships — surfaced risks to leadership proactively through regular business reviews, keeping multi-stakeholder programs on schedule despite parallel execution.

Community Manager, Program Coordination — Google (via Optimum Infosys) *May 2022 – May 2023*

- Exceeded quarterly program OKRs by 50% through a tiered engagement strategy (8% MoM growth, 30%+ engagement rate).
- Built a structured feedback loop translating field input into product-improvement tickets via Buganizer, closing the loop between external partners and internal engineering.
- Coordinated a 100+-partner distribution program; maintained platform stability through daily issue triage and escalation management.

Program Lead, Institutional Partnerships — CodeChef *Nov 2020 – May 2022*

- Led 0-to-1 expansion of an institutional partner network — scaled from 100 to 300+ partner organizations in 12 months, tripling addressable reach.
- Drove 3x growth through structured partnership agreements and technical engagement initiatives.
- Designed a partner-integration model embedding structured technical challenges into partner programming — later adopted as a blueprint for a subsequent large-scale enablement program.

OPEN SOURCE & TECHNICAL CONTRIBUTIONS

- Mozilla Reps — organized technical workshops on open web standards; managed distributed contributor teams.
- GitHub Campus Expert — delivered technical training on developer tooling; led cross-community technical initiatives.
- Gatsby (OSS Maintainer) — code review and technical contributions to a production React/JavaScript framework.

EDUCATION

B.Tech, Computer Science & Engineering — Lovely Professional University (2017–2021)

Google UX Design Professional Certificate
